

CONFIDENTIAL FLAVOR BRIEF

Date: July 9th, 2025

Issued by: R. Conroy, N. Levitsky

PROJECT INFORMATION

Project Name/Brief #: TheraBreath Seasonal Oral Rinses / FL2025-11

Reason for Brief: There is an opportunity for the TheraBreath brand to further expand into Adult mouthrinse segment with new Seasonal flavors. These flavors will be used within the core FRESH BREATH Oral Rinse formulation.

The Peppermint Vanilla Swirl will launch during the Fall/Winter (~September) 2026, with first production in early 2026.

Target Audience: Adult non-alcohol mouthrinse consumers, with a focus on Gen Z and Millennials (aged 18-41). Must be interested in trying Seasonally flavored products.

Flavor Concept/Objective: Develop three flavors that fit the TheraBreath brand and deliver upon seasonal product trends. Consider profiles that blend familiar, fresh cues such as Mints with seasonal novelty. The flavor experience must deliver a category appropriate level of freshness and must not be overly sweet or cloying. Acceptable flavor stability is **key** and will be used to evaluate success.

The direction for each submission is detailed below:

Concept#1: Peppermint Vanilla Swirl: This direction was a top testing flavor name in a C&D led concept test, closely followed by a similar concept named **Vanilla Ice**.

Consider blending vanillic flavor characters with Mints and cooling materials to deliver a flavor experience that is fresh, clean and 'not too sweet'. Vanilla profile should be kept simple and 'light' as to not become too heavy or edible. Soft, sweet, creamy Mint profiles should be used to support the Vanilla callout while still delivering a Mint-forward, breath freshening impression.

Concept#2: Frosted Delight (F/W):

Concept#2 and Concept#3 directions are more open; however, Mint and/or fresh Fruity/Botanical notes must be at the forefront of the flavor experience. Consider flavor trends in adjacent

categories such as Food & Beverage for inspiration but overly heavy, sweet or food-type flavors are out of scope.

For Concept#2: Consider crisp and refreshing fruit flavors such as juicy Orchard Fruits (Apple, Pear, Plum), warm Citrus (Blood Orange, Mandarin) and cool Berry profiles (Blueberry, Blackberry). Warm, spiced Beverage profiles such as Chai, Ciders, and Coffees can be explored but ensure that overall freshness is maintained.

Concept#3: Freshly Picked (S/S): T

For Concept#3: Consider juicy, ripe, refreshing fruit flavor types that can be found at a Farmers or Street Market during the Spring/Summer season. Bright berries like Strawberry, mouthwatering Melon types and sparkling Citrus notes are all within scope, so long as fruit flavors pair well with Mints. Consider Beverage type profiles that can be commonly found and served as 'iced' or 'chilled'.

While the US is the primary launch market, consider and support the Global appeal of each direction as appropriate.

Include flavor materials that mask or compliment the taste characteristics of the base, most importantly the 'chlorine' flavor note lent by the Sodium Chlorite, throughout rinsing and into the aftertaste. Impactful flavor materials can be used to deliver freshness and achieve good base coverage, but please keep in mind that any taste and/or sensation that is overtly strong could be perceived as harsh and/or burning, and would be out of scope given the 'non-burning' claim that is key to the TheraBreath brand equity.

Stability Performance Benchmark:

TheraBreath Fresh Breath mouthrinse – Invigorating Icy Mint flavor

Success Criteria:

Flavor must be well-liked by the TheraBreath consumer. Must be appropriate for the Oral Care category, the season, and deliver upon key category attributes of Fresh and Clean from initial rinsing through aftertaste.

Final decision will be based on internal expert CHD assessment and an external consumer test (CLT/HUT, TBC). Results from consumer testing, stability testing, and submission data will be used to support inclusion into a Seasonal Flavor Bank which will support future yearly launches as well as other retailer exclusives where appropriate.

BASE INFORMATION

.....
The finished product has a specific gravity range of 0.98 - 1.02, and a target pH range of 7.0 to 7.5. The product should remain colorless and clear of particles with no phase separation. It is imperative that the addition of flavor does not impact these key product characteristics.

The base has been prepared with a 3.0% 'hole' for addition of flavor, sweetener(s) and PEG-40 if/as needed. The base provided contains no sweeteners, use additional Xylitol and Sucralose as needed for optimal flavor/sweetness balance. Q.S. with water to 100%.

Please provide your recommendations for dosage of Flavor and Sweetener(s) on the final submission date.

Blending Instructions	Add flavor directly in the base, or if needed, add flavor to PEG-40 Hydrogenated Castor oil (CAS#61788-85-9) prior to adding to the base.
Inactive Ingredients	Water (Aqua), Glycerin, Citric Acid, Sodium Hydroxide, Sodium Chlorite, Sodium Benzoate, Sodium Bicarbonate
Stability Requirements	Samples must be placed on stability for one month at 4°C, RT, & 40°C. No change in flavor character, impact, product color or viscosity that exceeds the changes observed the benchmark, TheraBreath Fresh Breath mouthrinse - Invigorating Icy Mint. Please report any negative findings to R. Conroy

Safety and Regulatory Requirements: Flavors must meet criteria for ‘Natural Flavor’ labelling given by **US FDA CFR Title 21 Chapter 1 Subchapter B** (Food Labeling Requirements).

Must exclude all Church & Dwight banned materials as per Supplier Safety Statement (Appendix 1 version 10/2024). Flavors must be globally compliant including Japan and Korea under CHD Safety/Toxicology guidelines for Flavors. Must also be IFRA 51 compliant and allow 10% buffer for IFRA max use level to account for downstream production.

Must be designed to be Kosher, Vegan, Gluten Free and Halal certifiable. **The applications for specific material certifications, namely Kosher, must be submitted immediately following receipt of business award letter.**

Flavor must not contain:

- Alcohol
- Foaming agents
- SLS
- Detergents
- Artificial flavors
- Colors/dyes
- Preservatives

SUBMISSION INFORMATION

.....

Interim Review Date: August 8th, 2025

Final Submission Date: September 5th, 2025

Number of Final Submissions: 3 (one per direction)

Quantity of Flavor: 8 oz flavor shipped to Elisabeth Memin in Princeton

Finished samples: 50 mL bottle of submission (ship to Ross Conroy, Neonila Levitsky and Georgia Anderson at the Princeton address)

Flavor Level: 0.25% (target)

Price/lb: \$30.00 / lb (or cost equivalent)

SUPPORTING DOCUMENTATION FOR FINAL SUBMISSION

.....

1. Flavor Description (and flavor name suggestions)
2. NA SDS, EU SDS, CofA, TDS/PDS, Pricing Letter
3. Single document stating: VP, % VOC, list of HAP's and total % in submission
4. EU Allergen Statement, EU Cosmetic Regulation, IFRA Certificate
5. GMO Statement
6. FEMA GRAS Statement
7. Food Allergen Statement including Gluten Free Statement
8. Kosher Certification (with certification to follow, if awarded or selected for inclusion into Seasonal flavor bank)
9. Completed CHD Global Flavor Supplier Safety Statement
10. Document stating submission is 'free from' list of ingredients mentioned in Safety/Regulatory Requirements
11. Document stating submission meets criteria for 'Natural Flavor' as defined by FDA CFR Title 21 Chapter 1 Subchapter B
12. Expert or consumer data supporting your submission
